Education

Western Governors University
Bachelors of Science in Computer Science

Remote
In progress

Experience

Software Developer
Full-Stack Engineer

Remote
2023 – Present

- Design, develop, test, and deploy custom software solutions, workflow automation tools, and business systems for clients across property management, e-commerce, and professional services industries.
- Lead the full software development lifecycle, including requirements analysis, system architecture, application development, integration testing, deployment, maintenance, and post-launch support.
- Develop and maintain full-stack web applications utilizing PHP, Python, React, WordPress, MySQL, MongoDB, Redis, and related technologies.
- Collaborate directly with stakeholders to gather requirements, evaluate technical solutions, and implement software systems that improve operational efficiency and business processes.
- Develop and integrate RESTful APIs to support communication between internal systems, third-party platforms, and web-based applications.
- Implement secure authentication systems, role-based access controls, and administrative dashboards to improve operational efficiency and data management.

Selected Client Engagement

Property Management Platform (Confidential Client)

- Architecting and developing a centralized full-stack web application to automate tenant management, complaint resolution, rent collection workflows, meeting documentation, task management, and operational reporting.
- Gathered business requirements and translated operational processes into scalable software solutions supporting day-to-day property management activities.
- Designing and implementing a four-tier role-based access control system, secure authentication workflows, and administrative dashboards to support controlled access to sensitive business data.
- Developing backend application functionality using PHP, WordPress, MySQL, and custom business logic while integrating responsive user interfaces with Tailwind CSS.
- Designing database structures and workflow automation processes to improve data integrity, operational visibility, and organizational accountability.
- Implementing meeting documentation and task-generation workflows to support organizational decision-making and follow-through.

Skills & Interests

Technical: PHP, Python, JavaScript, TypeScript, React, Flask, Django, WordPress, HTML, CSS, Tailwind CSS, MySQL, MongoDB, Redis, Git, GitHub, Nginx, CI/CD, Google Cloud Platform

Analytics & Optimization : Google Analytics 4 (GA4), SEMrush, Microsoft Clarity, A/B Testing, SEO Optimization

Methodologies : Agile Development, Scrum, Stakeholder Communication, Requirements Gathering, Business Process Automation, Software Architecture, Role-Based Access Control (RBAC), Content Management Systems (CMS)

Interests: Software Engineering, System Design, Business Automation, Artificial Intelligence, Product Development
